

MIRROR MOUNT WITH ACCESSORY HOUSING

ABSTRACT OF THE DISCLOSURE

A mirror mount assembly is adapted for mounting to an interior surface of a windshield of a vehicle and for pivotally mounting an interior rearview mirror assembly thereto. The mirror mount assembly includes a mounting base for mounting at the interior surface of the windshield, an accessory housing extending generally downwardly from the mounting base, and at least one accessory positionable within the accessory housing. The mounting base includes a ball member for pivotal connection to the mirror assembly. The accessory may be one or more of at least one illumination source, a microphone, an attachment member, a compass sensor, an antenna and an interface button.
